

5/24/99

We urge the FDA to look hard at all the antibiotics that are put into animals used for food. We need stronger guidelines which would deny approval of antibiotics for animal use if the same drug is used to treat infections in humans.

The industry needs to "clean up its act" not put more and more garbage in animals to try and keep them surviving until harvest. Antibiotics should be used as a last resort, not randomly put in feed, water, and whatever.

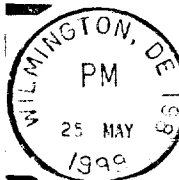

How have our food practices gotten so deplorable? Give us back the good food GOD intended us to eat and give animals a better life before harvest.
